EXP NO: 17 RANDOM SAMPLING AND SAMPLING DISTRIBUTION

AIM:

To explore random sampling from a population and understand the concept of sampling distribution using Python in Jupyter Notebook.

PYTHON CODE:

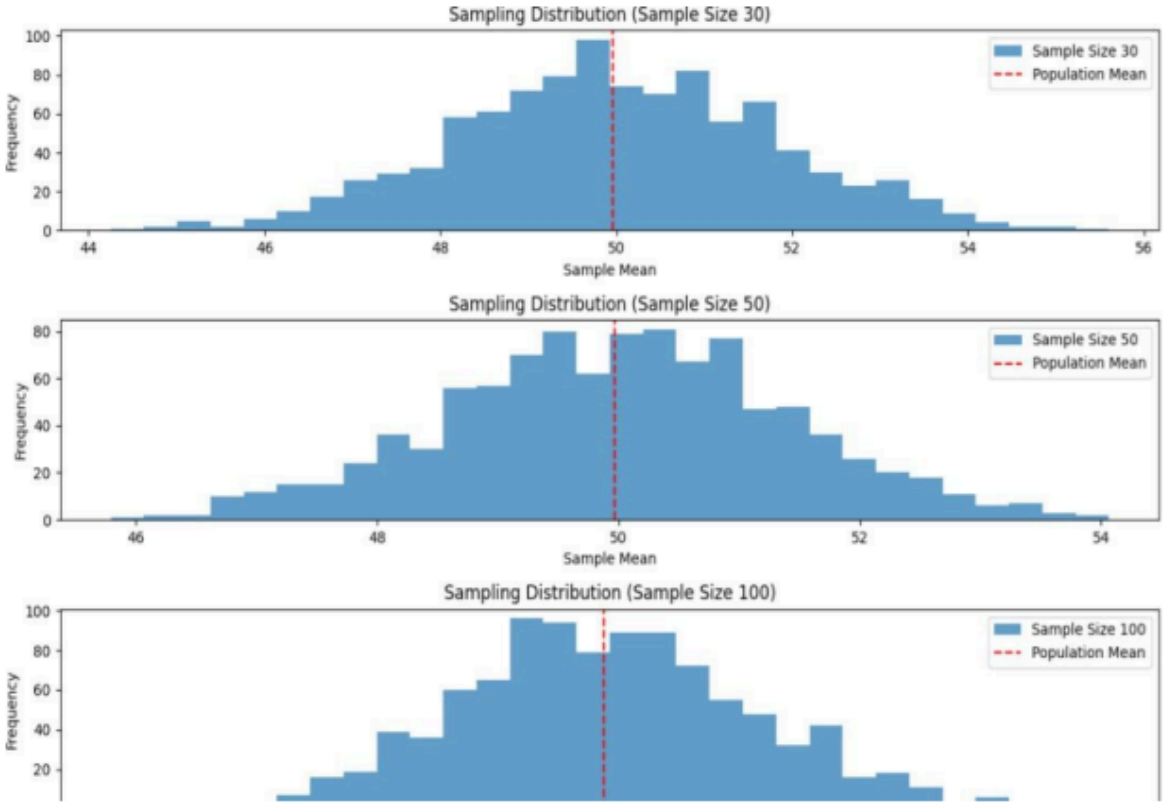

```
import numpy as np
import matplotlib.pyplot as plt

population_mean = 50
population_std = 10
population_size = 100000
population = np.random.normal(population_mean, population_std, population_size)
sample_sizes = [30, 50, 100]
num_samples = 1000
sample_means = {}
for size in sample_sizes:
sample_means[size] = []
for _ in range(num_samples):
sample = np.random.choice(population, size=size, replace=False)
sample_means[size].append(np.mean(sample))
plt.figure(figsize=(12, 8))

for i, size in enumerate(sample_sizes):
plt.subplot(len(sample_sizes), 1, i+1)
plt.hist(sample_means[size], bins=30, alpha=0.7, label=f'Sample Size {size}')
plt.axvline(np.mean(population), color='red', linestyle='dashed', linewidth=1.5,
label='Population Mean')
plt.title(f'Sampling Distribution (Sample Size {size})')
plt.xlabel('Sample Mean')
plt.ylabel('Frequency')
plt.legend()

plt.tight_layout()
plt.show()
```

OUTPUT:

RESULT:

Thus the code is executed successfully.
